DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claim(s) 1-3, 10 and 11 are rejected under 35 U.S.C. 102(e) as being anticipated by Miyauchi et al. (US 2003/0002637 A1).

Regarding **claim(s) 1**, Miyauchi discloses a telephone applicable to a public switched telephone network (PSTN) and the IP network (paragraph 0001), comprising:

a first interface for transmitting and receiving analog signals over the PSTN (1100 on FIG. 3);

a second interface for transmitting and receiving packet data over the IP network (5000 on FIG. 3);

means for communicating with a telephone number translation server connected to the IP network through said second interface when a call is originated by entering a PSTN telephone number and obtaining an IP network telephone number of a destination telephone corresponding to the PSTN telephone number (paragraph 0158);

Application/Control Number: 10/635,552

Art Unit: 2614

means for communicating with a call agent connected to the IP network through said second interface to obtain IP address information of the destination telephone corresponding to said IP network telephone number, and establishing call connection with the destination telephone via the IP network by using the IP address information (paragraph 0158); and

means for establishing call connection with the destination telephone via the PSTN through said first interface if the IP network telephone number of the destination telephone corresponding to said PSTN telephone number cannot be obtained from said telephone number translation server (paragraph 0168).

Regarding **claim(s) 2**, Miyauchi discloses a telephone, further comprising means for communicating with said telephone number translation server and registering a mapping of the telephone's own PSTN telephone number and IP network telephone number to the server when the telephone is connected to the IP network (FIG.3).

Regarding **claim(s) 3**, Miyauchi discloses a telephone, wherein, if the entered PSTN telephone number consists entirely of local exchange code and subscriber number, said means for obtaining the IP network telephone number converts the entered PSTN telephone number into a numbering format including a toll number prior to obtaining the IP network telephone number of the destination telephone (paragraph 0158).

Application/Control Number: 10/635,552

Art Unit: 2614

Regarding **claim(s)** 10, Miyauchi discloses a call connection control method for connecting a calling telephone, which is connected to a public switched telephone network and the IP network, to a destination telephone (paragraph 0001), comprising the steps of:

communicating with a telephone number translation server connected to the IP network when a call is originated by entering a PSTN telephone number and obtaining an IP network telephone number of the destination telephone corresponding to said PSTN telephone number (paragraph 0158);

obtaining IP address information of the destination telephone corresponding to said IP network telephone number from a call agent connected to said IP network and establishing call connection between the calling telephone and the destination telephone via the IP network by using the IP address information (paragraph 0158); and

establishing call connection between the calling telephone and the destination telephone via the PSTN if the IP network telephone number of the destination telephone corresponding to said PSTN telephone number cannot be obtained from said telephone number translation server (paragraph 0168).

Regarding **claim(s)** 11, Miyauchi discloses a call connection control method, further comprising the step of storing a mapping between the IP network telephone number obtained from said telephone number translation server and said PSTN telephone number into a cache table, wherein when a call is originated by entering a PSTN telephone number, said cache table is searched for the IP network telephone

Application/Control Number: 10/635,552 Page 5

Art Unit: 2614

number of the destination telephone corresponding to the entered PSTN telephone number and, if the IP network telephone number of the destination telephone exists in the cache table, the IP network telephone number is used, if not, the IP network telephone number of the destination telephone is obtained from said telephone number translation server (paragraph 0158).

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gerald Gauthier whose telephone number is (571) 272-7539. The examiner can normally be reached on 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Fan Tsang can be reached on (571) 272-7547. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
